WAT-SG-89: Improving the Water Environment without Significant Impact on Storage Hydropower Schemes

Summary

The supporting guidance document was written to explain our approach when considering how improvements to hydro impacted water bodies may have an impact on the use (hydro generation).

The phasing of measures referred to in the guidance has been reviewed and is currently out for consultation.

As a result, this supporting guidance document is now under review for completion following the reprioritisation contained in the RBMP consultation.

For further information, contact [Michael Wann](#) or the Water Unit.
